

Bridging Clamps

Bridge clamps offer both an economic answer and a cost effective solution.

Bridge clamps guard against leaks and spills by sealing both U-Lok exterior helix ducting and AF wire encapsulated ducting. Stainless steel bridge clamps, in comparison to traditional band clamps provide a superior seal for both interior and exterior helix ducting. The flat band clamps snugly around the material between the raised helix, assuring a tight seal at the venting connection.

U-Lok ducting spirals runs right-to-left and AF spirals run left-to-right. With each configuration, the bridging clamp prevents leaks or spillage at the connection.

All products are warranted to be free from all defects in material and workmanship. It is impossible to test all products under all conditions to which they might be subjected in the field. It is therefore the buyer and/or end users' responsibility to test all products under the conditions that duplicate the service conditions prior to installation. All improvements, all specifications are subject to change without prior notice. It is the buyer and/or end users' responsibility to review our complete **Terms and Conditions of Sale** located on our web sites at: www.novaflex.com / www.z-flex.com / www.flexmaster.com.
