

Elevated Temperature Service Advice

All Novaflex® composite hoses are rated for service at their stated **Maximum Working Pressures** across their full operating temperature range, however, simultaneous elevated temperature and pressure service will impact service life.

For guidance on recommended maximum combined elevated temperature and pressure service, please refer to the graph below.

Additionally, arduous handling / installation environments can further impact service life.

For optimum service life performance, hoses types should always be selected based on all expected operating conditions being well within their maximum operating parameters, with maximum values regarded as short term / intermittent use only.

For hose selection advice based on your specific service conditions, please contact your Novaflex® representative or distributor.
